John O. E. Clark

Chemistry

This book belongs to
Bonny Manner.

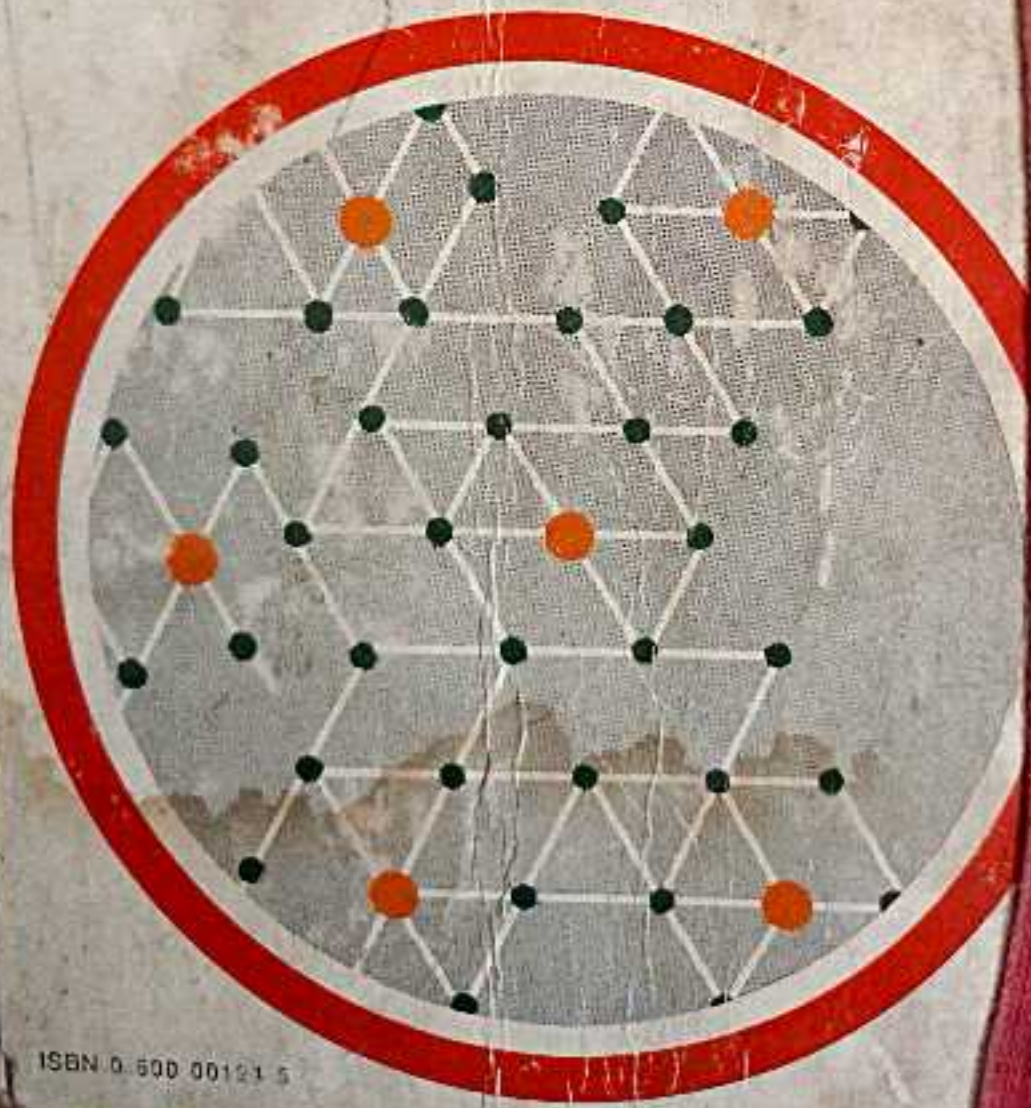

CONTENTS

4	Atoms
14	Molecules
22	Acids and alkalis
30	Gases
42	The halogens
50	Carbon
74	Phosphorus and sulphur
82	The alkali metals
86	The alkaline earths
92	The metals
110	The metalloids
114	Qualitative analysis
130	Quantitative analysis
136	Rubber and plastics
142	Coal and petroleum
147	Explosives
152	Dyes, drugs and detergents
156	Books to read
157	Index

40p United Kingdom

This book provides a brief survey of chemistry. The theory and principles of the subject are treated in a straightforward, non-technical manner and the stress placed upon practical applications enables the reader to appreciate the importance of chemistry in shaping modern technology. For example, atomic structure is the key to nuclear power, and the properties of organic molecules are the basis of the manufacture of plastics and drugs. The full colour illustrations are a lively accompaniment to a lucid text.
