

Penguin Science Survey A

1965

718

Contents

GENERAL INTRODUCTION	7
PHYSICAL RESEARCH	9
High Field Superconductivity - <i>K. Mendelssohn</i>	11
Surface Structures of Crystals and Low-energy Electron Diffraction - <i>J. J. Lander</i>	31
Flash Photolysis and Shock Waves - <i>Peter Borrell</i>	56
Physics of the Brain - <i>W. Grey Walter</i>	75
Automated Spacecraft of the United States - <i>Edgar M. Cortright</i>	98
INDUSTRIAL APPLICATIONS OF SCIENCE	133
Operational Research - <i>Patrick Rivett</i>	135
Diamonds in Industry - <i>S. Tolansky</i>	153
Reactive Dyes - <i>R. H. Peters</i>	173
Rubber - <i>Leonard Mullins</i>	197
The Supersonic Airliner - <i>John Taylor</i>	212
High Speed Propulsion of the Future - <i>J. G. Keenan</i>	227
COMMUNICATIONS	255
The Communication of Information - <i>Colin Cherry</i>	256
Science on Radio - <i>John Newell</i>	275
NOTES ON CONTRIBUTORS	293

Penguin Science Survey 1965

A

PHYSICAL RESEARCH

HIGH FIELD SUPERCONDUCTIVITY

K. Mendelssohn

SURFACE STRUCTURES OF CRYSTALS AND
LOW-ENERGY ELECTRON DIFFRACTION

J. J. Lander

FLASH PHOTOLYSIS AND SHOCK WAVES

Peter Borrell

PHYSICS OF THE BRAIN

W. Grey Walter

AUTOMATED SPACECRAFT OF THE UNITED STATES

Edgar M. Cortright

INDUSTRIAL APPLICATIONS OF SCIENCE

OPERATIONAL RESEARCH

Patrick Rivett

DIAMONDS IN INDUSTRY

S. Tolansky

REACTIVE DYES

R. H. Peters

RUBBER

Leonard Mulline

THE SUPERSONIC AIRLINER

John Taylor

HIGH SPEED PROPULSION OF THE FUTURE

J. G. Keenan

COMMUNICATIONS

THE COMMUNICATION OF INFORMATION

Colin Cherry

SCIENCE ON RADIO

John Newell

Cover design by Henric

Published by Penguin Books
