MACHINISTS LIBRARY:

TOOLMAKERS HANDY BOOK

**For Beginning Students, Apprentices, Machine Operators
and Helpers, Hobbyists, and Instructors.**

This text covers the fundamentals of toolmaking and die-making operations, including layout and design of jigs and fixtures, gears, cams, and dies. The operation and setups for centerless grinders and lapping machines are also included. Heat-treating furnaces and annealing, hardening, and tempering of metals are presented in an easy-to-understand manner.

An attempt is made to familiarize the beginner with the various toolmaking and heat-treating operations. This third volume of a three-volume series covers layout and design of toolmaking and die-making operations, and the heat-treating and cold-treating processes for metals. It can be used either by itself as a reference text or in conjunction with the other two volumes.
