There's Adventure in . . .

Randy Morrow is a young American boy, who, with his brother and father, looks at science. They look at it in its theoretical aspects and for its practical applications. We, the readers, take a journey with them through their investigations. We observe and we experiment. We are encouraged to be scientists, to act out this role. We also have the chance in the process not only of learning about the sciences; we are given the opportunity of thinking about our potential aptitude in one of these careers for the future. We, the young readers, find that **THERE'S ADVENTURE IN science**. 12/6 each title

ATOMIC ENERGY
CHEMISTRY
ELECTRONICS
CIVIL ENGINEERING
GEOLOGY
METEOROLOGY
MARINE SCIENCE

WORKING WITH series . . .

By E. A. CATHRALL, B.Sc.,
and P. N. HOIT, B.Sc.

... send the children off to discover facts. . . . They are told in clear, simple and direct language what to do, but all observations and conclusions are made by them with little or no prompting by the authors. They are helped by the many excellent illustrations, mainly in colour. This is a book with a true educational approach to the teaching of science to young children. Although its main use is in the junior school and the lower reaches of the secondary modern, it can also be used in infant schools. There is an appendix suggesting ways in which the books can be used, which would help non-specialists who wish to start off their classes on a course in simple science.'

—TECHNOLOGY, reviewing **WORKING WITH MAGNETS**, sums up the purpose of the series. Each title contains approximately 48 pages, is illustrated in full colour, and has limp cloth covers. 6/- per volume

MAGNETS
WEATHER
LIGHT
SOUNDS
WATER
SEASHORE
WOODLAND
ELECTRICITY
PLANTS
GRASSLAND
AIR
