

WORKSHOP CALCULATIONS TABLES AND FORMULA

Workshop Calculations, Tables and Formulae

BY P. J. CAMM

106 ILLUSTRATIONS

This is an ideal everyday handbook for the engineer, draughtsman and student. It contains the tables and formulae required daily in the shop and drawing office. The information is presented in the most easily consultable form, and complete tables of the new Unified screw threads are included. Its wide scope makes it also very useful for fitters, turners, mechanics, patternmakers, foundrymen, millwrights, and model makers.

CONTENTS

- | | |
|------------------------------------|------------------------------|
| Micrometer and Vernier Measurement | Standard Pitch |
| Trigonometrical Formulae | Worm and Worm Wheels |
| Extracting Square Roots | Spiral or Screw Gearing |
| Extracting Cube Roots | Tapers and Cones |
| Tables of Roots | Pulley Calculations |
| Continued Fractions | The Dividing Head |
| Arithmetical Progression | Differential Indexing |
| Geometrical Progression | The Slide Rule |
| Harmonical Progression | British Handbook Numbers |
| Weights and Measures | Cutting Speeds |
| Horse-power | Keys and Cotters |
| Force, Energy, and Power | Standard Screw Threads |
| Heat, Time, and Velocity | Drill Sizes |
| Electrical Units | Melting Points of Metals |
| Comparison of Thermometers | Weights of Materials |
| Pulleys | Twist Drills for Wood Screws |
| Pendulum of Forces | Wood Screw Proportions |
| Lever | Weights of Wood |
| Centrifugal Force | Powers and Roots |
| Moments of Inertia | Wire Gauge |
| Metric System | Nominal Limits |
| Screw Cutting | Sines, Cosines, Tangents |
| Tool Grinding | Metric Conversions |
| Lubricants for Cutting | Logarithmic Tables |
| Spiral Gearing | Unified Screw Threads |
| Bevel Gears | Decimal Equivalents |
| | Index |
